ANNOUNCEMENT
OF THE
HAHNEMANN MEDICAL COLLEGE
OF
PHILADELPHIA.

IN originating a new institution for the education of Homœopathic physicians, the Trustees of the Hahnemann Medical College of Philadelphia deem it expedient to state the reasons which establish the necessity and public importance of the enterprise.

FIRST.—The City of Philadelphia being the acknowledged medical metropolis of North America, is also the natural centre of influence of the Homœopathic school; and, according to her standard, Homœopathy must take rank over the whole country, just as the standard of her Allœopathic institutions affects the position of all others.

SECOND.—A large number of Homœopathic physicians are in the habit of recommending their students to attend one or all their courses of lectures at the Allœopathic schools; alleging that general medical science, as well as surgery—in short, all except the bare matter of Homœopathy itself—can be successfully acquired only in that way.

THIRD.—The high standard of scientific attainment requisite to constitute a thorough medical education demands most careful attention ; for Homœopathy, however pure, if not based upon general medical science, must, in common with all other modes of practice, end only in quackery.

FOURTH.—The promising field presented to our school in the domain of surgery, its vast importance, as illustrated during the late war, and the claims of humanity upon us in this direction, give special force to the universal demand for surgical knowledge.

FIFTH.—By regarding the wishes of the profession and public in these respects, we hope to obviate the alleged necessity for the education of Homœopathic practitioners in Alloœopathic schools.

We believe that general medical knowledge, even including that pertaining to the practical tenets of other systems, may be as faithfully communicated from a Homœopathic stand-point as from any other ; and we are firmly of the opinion, that when received by the student from Alloœopathic teachers, mingled with ridicule of Homœopathy, they become the sources of doubt and of error, in all the after-life of the physician. We also believe it to be the duty, as well as privilege, of all Homœopathic physicians, to see to it that their Colleges shall be the equals of any ; and, at the same time, to maintain and support them by their active efforts.

If it be asked why we do not co-operate with the existing Homœopathic College of this city, we have to reply, not without regret, that our co-operation has been declined, when tendered in the only form in which it could be

rendered available. We are well aware of the responsibility which we thus assume in our relation to the friends of Homœopathy; and, that the profession may not be inconvenienced in any way, have decided to admit the graduates of the old College to the same privileges as our own Alumni.

In order to the perfect accomplishment of our design, we have established a system of permanent scholarships, in lieu of the onerous one of interest-bearing stocks so common in medical colleges. Temporary accommodations adapted to the purposes of teaching, and all necessary *apparatus*, have been secured, and will be opened for a *preliminary course of lectures*, on September 30th, 1867. This course will be gratuitous.

We are gratified to announce to the profession that, in accordance with the enlightened spirit of the age, the Legislature of this State have enacted a law, whereby dissection is legalized, and the expense of material reduced to the mere cost of transportation.

The study of Practical Anatomy may be commenced in September, if desired. It is recommended that students familiarize themselves, so far as possible, with the anatomy of the skeleton, while yet at home, so that, on reaching the city, they may at once enter upon this important branch of study, which is, by the rules of the College, obligatory.

Attendance upon clinical instruction is acknowledged to be essential to the complete preparation of the physician and surgeon. Our plan embraces the future establishment of a large Homœopathic hospital; but, for the present, a lectureship on Clinical Medicine has been instituted, to supply this want, and will be ably filled, and abundantly supplied with means of illustration.

Clinical Pathology and Surgery being equally necessary, special provision has been made in this direction. The regular college clinics will be well supplied with illustrations in these departments; and, that nothing may be wanting to make the instruction as thorough as possible, every second-course student and candidate for the degree *will receive, at the expense of the College, a ticket to the clinics and medical library of Pennsylvania Hospital*, which is located at a short distance from the College.

Medical Jurisprudence, which has become a most important element of medical instruction, will be taught by a gentleman whose past success in this, his favorite branch, is a guarantee for the future.

For the double purpose of assuring the public and the profession of the fitness of graduates to practice medicine, and of securing to every candidate for a degree a fair and impartial inquiry into his attainments, a Board of Curators have been appointed, consisting of gentlemen well known to the Homœopathic school, who will, as the By-Laws of the College require, constitute an advisory Board of Examination. Their service is, however, at the option of the candidates, so far as direct examinations are concerned.

The following extracts from the By-Laws, regarding special degrees, abolishes the too prevalent practice of granting such upon insufficient grounds, whilst meritorious physicians are placed in a position to secure the desired honors:

XXVII.—Honorary degrees shall be conferred on distinguished practitioners, according to the recommendation of the Faculty and Board of Curators.

XXVIII.—Special degrees shall be conferred on such candidates only as shall be recommended by a duly-appointed examining committee of a regularly organized County or State Homœopathic Medical Society, under seal of the same, whether the candidate be a graduate of another Medical College or not.

A Thesis will be required from candidates for special degrees.

The College Dispensary is now open, and in successful operation.

The Surgical, Medical and Obstetrical clinics will be opened on the First of September. The Anatomical rooms will also be opened at the same time.

The Introductory Address will be delivered by Professor Koch, at twelve o'clock, noon, of the second Monday in October; and the course of lectures will begin at ten o'clock the next morning.

Surgical, Medical and Obstetrical clinics, connected with the College Dispensary, are held on Wednesday and Saturday of each week during the session. They afford to the student admirable opportunities to familiarize himself with the practical principles taught from the respective chairs; and among the multitude of poor who apply for aid, cases of Obstetrics are procured for the members of the graduating class.

The Registrar will be prepared to give to the students information relative to board, &c.

All letters relative to the affairs of the College should be addressed either to the Dean or Registrar.

JASON L. FENIMORE,

President.

JOHN A. MARSHALL, *Secretary.*

REGULATIONS OF THE COLLEGE.

The regular Course of Lectures will begin on the second Monday in October, and end about the first of March ensuing.

The Fee for the course of lectures must be paid to the Dean, on matriculating, who will give the Matriculant the Full Ticket of the entire Faculty.

To constitute a full course, the full ticket must be taken by the first Monday in November, except in special cases.

Students who have attended two full courses of instruction in this institution shall be admitted to the subsequent courses of the College without further charge.

Students may become candidates for Graduation who have attended two full courses of instruction in this institution; or one course only, in case they have attended one or more full courses in another respectable Medical College.

A candidate must be at least twenty-one years of age, of good moral character, possessed of sufficient preliminary education, have applied himself to the study of medicine for three years, and have been the private pupil, for two years, of a respectable practitioner of medicine; and must have attended at least one course of Practical Anatomy.

When applying for examination, he must first exhibit his tickets to the Dean of the Faculty, or give other satisfactory evidence of having complied with the regulations.

He must, on or before the 1st of February, deliver to the Dean of the Faculty an Essay or Thesis, in his own handwriting, composed by himself, on some medical subject, at which time he will pay the fee of graduation; if rejected, the money will be refunded.

The Thesis may be written in English, Latin, German, French or Spanish, at the option of the candidate, and written on one side of the sheet only.

The Examination for graduation will begin about the last of February, and the Commencement for conferring the Degrees of the College will be held as soon after the close of the lectures as practicable.

The examination will be conducted in private by each Professor, and the voting, in the case of every candidate, shall be by ballot.

Special examinations may, with the consent of the Faculty, be held in particular cases.

In unsatisfactory cases, the candidate may, with the consent of the Faculty, avail himself of a second examination before the Faculty and the Board of Curators.

Formal notice of each satisfactory examination shall be given by the Dean to the successful candidate, who shall record his name and address upon the register of graduates, with the title of his Thesis.

The names of the successful candidates are to be reported by the Dean to the President of the College, who will communicate such report to the Board of Corporation Trustees, in order that, if confirmed by them, the degree may be conferred.

A successful candidate shall not absent himself from the Public Commencement, without the permission of the Faculty.

A Thesis may be published by the candidate, permission of the Faculty being first obtained.

F E E S .

Matriculation, (paid once only; students who have matriculated at the Homœopathic Medical College of Pennsylvania will not be required again to pay the fee in this).....	\$5 00
Practical Anatomy, (ticket perpetual; tickets of the Homœopathic Medical College of Pennsylvania heretofore issued will be received at this College).....	10 00
Graduation	30 00

THE AMERICAN JOURNAL
OF
HOMOEOPATHIC MATERIA MEDICA

Is conducted by the Faculty of the Hahnemann Medical College of Philadelphia. As the name indicates, the object of its publication is to furnish to the profession a complete Materia Medica and such clinical cases, characteristics and observations as have direct relation to it. No polemical articles, long essays, valedictory addresses, or theoretical lucubrations will be admitted to its pages. In these respects it will differ essentially from any other journal now published.

Any *instructive* cases coming from known responsible sources will be gladly received; but they must be "to the point," and contain the real characteristic indication of the remedy given. We shall refuse all such as do not come up to this standard.

Dr. Hering's Materia Medica will be so paged that it can be separated from the rest of the work, and bound.

The cases will be selected from among the best of all that have been published in different languages, from Hahnemann's time to the present. This part will also be so published that it can be bound into a separate volume, and the index will refer to the remedies used, and to the cases nosologically. The work will thus be a valuable book for reference. It will be, substantially, a work on Homœopathic practice.

The whole Journal will be stereotyped, so that back numbers can be furnished and will be published to subscribers at very nearly cost. Twenty-four pages will be issued on the basis of 500 subscribers. When the subscription reaches 750, the number of pages will be increased to thirty-six, and when it reaches 1,000, it will be increased to forty-eight pages. This makes it an inducement for subscribers to increase the subscription as much as possible, for the sooner the list reaches 1,000, the sooner will each subscriber have the number of pages doubled for the same money.

The subscription price is \$2, *invariably* in advance. This rule will be strictly adhered to.

Subscriptions and communications, American exchanges, etc., to be addressed to

HENRY NOAH MARTIN, M. D.,

526 Spruce street.

Foreign correspondence and foreign exchanges to be addressed to

C. HERING, M. D.,

114 North Twelfth street, Philadelphia, Pa.
